INCREASED PROTECTION OF PEOPLE'S FOOD

Governmental action to safeguard the food supply of the people is apparently becoming at once more direct and more energetic. The authorities do not content themselves nowadays with warning the public in a general way against the adulteration of food products; in many cases they indicate the products adulterated or misbranded and name the producers. This course is followed by the Board of Food and Drug Inspection at Washington which from time to time publishes notices of judgments rendered against concerns whose products are found to be adulterated or misbranded, these judgments imposing fines in many cases, and in some instances extending to the condemnation and destruction of products found to be decomposed or to contain putrid matter. In New York City, as appears from a report recently made to the Health Commissioner, the destruction of condemned foodstuffs has been on a very much larger scale this year than last. During the nine months of the year ending with September, the foodstuffs condemned and destroyed by order of the Health Department amounted to the large total of 20,568,688 pounds, which was not far from double the amount destroyed in the corresponding nine months of 1911, viz., 10,202,927 pounds. Of the enormous quantity of foodstuffs condemned by inspectors during the last nine months, 13,803,738 pounds, or more than one-half of the total, consisted of vegetables. It is interesting to note that only 42,965 pounds of eggs were condemned in nine months of this year, as compared with 65,878 pounds in the like period of last year, and that but 14,949 quarts of milk were found unfit for use this year, as compared with 16,768 quarts last year. The way of the transgressor against pure food regulations is evidently becoming more difficult.—Bradstreet's.

JUST THE TONIC FOR PALE GIRLS

A Good Color Means Better Health
and Dr. Williams' Pink Pills
Bring Both.

Girls who study hard or work hard, who grow pale and thin, who come home from school or shop too tired to do anything even in the way of amusement—these are the girls who will get most benefit from a course of treatment with Dr. Williams' Pink Pills for Pale People. No medicine ever offered the public has been such a boon to suffering women and girls as this tonic remedy. These pills are not a mere stimulant, giving temporary relief; they build up the body anew by making rich, red blood that imparts splendid health, brightness, cheerfulness, energy and ambition.

Dr. Williams' Pink Pills begin their work of improvement with the first dose. The first sign of improvement is usually an increased appetite, the absence of distressing symptoms after eating, more refreshing sleep, a better color in face and lips. These are signs that pure rich blood is now circulating through the body and that, with this necessary assistance, nature is effecting a cure. Mrs. Richard Ahrens, of Cole Block, Braintree, Minn., says: "Owing to a run-down condition of my blood, I suffered for over two years with debility and nervousness. My nervous system was in a terrible state. I lost flesh and suffered everything a woman could. I had severe pains through the top of my head and across my temples. When these spells came on me I would have to give up and was often confined to bed for a day or so. After these headaches I would feel weak for days. I had no appetite whatever. The doctor did not help me much. For a time I would feel better under his treatment and then would be worse again. Through reading about Dr. Williams' Pink Pills I was led to give them a trial. I soon felt better and gained rapidly. I gained in flesh, had a good color and could eat a hearty meal. I take the pills now once in a while for a tonic and always receive benefit from them."

Two booklets, "Building Up the Blood" and "Plain Talks to Women," will be sent free upon request. Dr. Williams' Pink Pills are sold by all druggists at 50 cents per box, six boxes, \$2.50, or by mail, postpaid, upon receipt of price, by the Dr. Williams Medicine Co., Schenectady, N. Y.

BUSINESS IS KEEPING GOOD

Bradstreet's review of the state of trade, under date of October 19, is in part as follows:

The situation is one of sustained, in some branches of abundant activity. In a word, so many lines are far enough sold ahead as to invest the situation in general with a high degree of assurance. Buying for immediate delivery is of heavy proportions, and calls for shipments are as insistent as heretofore, thus indicating that stocks are scarce and that goods are wanted in a hurry. At the same time, intermediate distributors are placing some orders for future shipment, but, as matters stand, it is prompt business the possessor the more significant aspects. Shipping rooms of many of the leading merchandise houses are forced to work double turns in order to facilitate shipments. On the other hand, retail trade has not enjoyed a full share of the activity witnessed in other quarters.

Industrial operations in the principal lines have not lost any of their well-known activity. The iron and steel industry continues to move at a very rapid gait, and in short, many finished products are sold up for six months to come, so that even if the race of new business has abated a little, the future can be viewed with more than ordinary equanimity. The price situation is especially strong. Leading producers are intent upon discouraging speculative buying, which usually crops up at a time like the present, when order books are so well filled.

Labor remains scarce, which factor, together with the increasing car shortage, restricts operations and retards deliveries in a multiplicity of lines other than iron and steel. The railways are moving an enormous volume of traffic, and while they are doing their level best to relieve conditions, the paucity of cars continues to grow. Returns from marketed crops are reflected in a quite general improvement in collections, save from southern points, and it is noticed that farmers are liquidating long outstanding debts. Receipts of wheat are heavy, corn is beginning to move from the southwest, and to some extent from the central west, while southern planters are freely marketing cotton, these developments as regards new supplies being sufficient to depress prices and to offset bullish factors.

Money is firm and in active demand, with calls still coming from country districts for crop-moving purposes. Stock market operations have been disturbed to some extent by the situation in the Balkans involving, as it does, the formal declaration of war by Turkey and advances in discount rates by over-sea banks; but on the other hand, the favorable position of our domestic affairs, in which the residential campaign seems to be a comparatively negligible factor, presents a backlog which does not suffer prices to manifest marked reactionary tendencies. Business failures for the week run far below those of various preceding weeks.

SCIENTIST HAS CREATED A 'FATHERLESS' FROG

WASHINGTON, Nov. 1.—A frog that never knew a father's love, and which has only half the number of ancestors of other more fortunate frogs, is the latest contribution to science of Professor Jacques Loeb, formerly of the University of California, but now connected with the Rockefeller Institute of Research. Interested visitors may view it as it wanders mournfully about in its cage in one of the exhibition buildings of the Congress of Hygiene and Dermatology, aimlessly hunting for the parent it never had. Professor Loeb's little frog, which answers to the name of Henry, lived the life of other little frogs, until it reached the egg stage. At that point Professor Loeb intervened. One scientist could understand just what happened, but the anomaly of it was that instead of a paterfamilias, such as all other frogs have had since frogs were first thought of, Professor Loeb's frog has to say Daddy to a complicated chemical formula.

Some few years ago Professor Loeb, while at Berkeley, Cal., aroused a great deal of discussion by his theory of the chemical origin of life, and succeeded in illustrating his point by artificially fertilizing a sea urchin's egg. But these life forms never got beyond the larvae stage.

Professor Loeb's theory of the fatherless frog is that if we were able to go back far enough we would all finally come to the stage where there were no more ancestors left. His theory is only partially demonstrated, by the success of Henry's upbringing, because it requires that the original frog, or its ancestors, should have neither father nor mother. Henry has to own up to a mother, though her identity has been lost.

It has not yet been ascertained whether or not Henry is a better frog than those produced in the usual way. Whether he could jump as far as the Calaveras frog made famous by Mark Twain is a question.

Nevertheless, Professor Loeb, who is a kind of godfather to Henry, is proud of him and visiting scientists linger long before his cage, or gaze admiringly as Professor Loeb takes him for his daily exercise at the end of a long string.

PNEUMONIA.

You never heard of anyone who used Chamberlain's Cough Remedy having pneumonia and millions of bottles of that remedy are sold every year. Pneumonia is undoubtedly a germ disease, and this remedy cleans out the culture beds that form in the throat and bronchial tubes and develop the germ of that disease. For sale by all dealers. Benson, Smith & Co., Ltd., agents for Hawaii.

You Beer Drinkers

Read the following opinion of a scientist, an authority who has experimented and therefore knows that "light starts decay even in pure beer."

Don't
Drink
Beer
from
Light
Glass
Bottles

"We have tested beers repeatedly, placing the bottles in the direct sunlight, and testing the same after one, two, three and five minutes exposure, found that the beer with three and five minutes exposure became undrinkable on account of the peculiar odor developed. The detrimental effect of light upon beer can be successfully counteracted by the employment of brown or dark colored glass bottles, and such bottles are, therefore, recommendable."

—Wahl-Henius Institute of Fermentology.

The Schlitz Brown Bottle is only another step for absolute purity in Schlitz beer.

We have adopted every invention, every innovation, every idea that could make for purity.

Schlitz was first brewed in a hut. Today our agencies dot the earth. Our output exceeds a million barrels a year.

YOUNG WIFE SAVED FROM HOSPITAL

Tells How Sick She Was And
What Saved Her From
An Operation.

Upper Sandusky, Ohio. — "Three years ago I was married and went to house-

keeping. I was not feeling well and could hardly drag myself along. I had such tired feelings, my back ached, my sides ached, I had bladder trouble awfully bad, and I could not eat or sleep. I had headaches, too, and became almost a nervous wreck. My doctor told me to go to a hospital. I did not like that idea very well, so, when I saw your advertisement in a paper, I wrote to you for advice, and have done as you told me. I have taken Lydia E. Pinkham's Vegetable Compound and Liver Pills, and now I have my health. If sick and ailing women would only know enough to take your medicine, they would get relief." — Mrs. BENJ. H. STANSBURY, Route 6, Box 18, Upper Sandusky, Ohio.

If you have mysterious pains, irregularity, backache, extreme nervousness, inflammation, ulceration or displacement, don't wait too long, but try Lydia E. Pinkham's Vegetable Compound now. For thirty years Lydia E. Pinkham's Vegetable Compound, made from roots and herbs, has been the standard remedy for female ills, and such unquestionable testimony as the above proves the value of this famous remedy and should give every one confidence.
